# multistranded tiger tail
## with bail ends

you will need the following supplies:

scissors | flat nose pliers | 6 crimp beads | 6 small jump rings to fit inside bails | 2 large jump rings | clasp | 2 bales | tiger tail wire | beads
**Step 1:** Cut 3 pieces of tiger tail wire that are 1" longer than the length of finished product. String on a crimp bead and a jump ring, then go back through crimp bead.
Push Crimp Bead up
Pull tail down

**Step 2:** Push the crimp bead up to toward the jump ring and at the same time pull the tail of the tiger tail down. Leave the tail 1.5" long.

**Step 3:** Using your flat nose pliers, crush the crimp bead flat. Repeat steps 1-3 on the other strands of tiger tail.
**Step 4:** Gather all 3 strands with jump rings attached and place inside the bale.

**Step 5:** Now that all 3 jump rings are inside the bail, make sure that all the holes are aligned with the hole of the bale. Take the large jump ring, twist it open, then link it through all the holes.
**Step 6:** Attach the clasp and re-close the large jump ring. Thread your first strand of beads as desired.

**Step 7:** Once you have threaded your first strand of beads, add a crimp bead and a small jump ring. Weave the tail of the tiger tail back through the crimp bead and a few beads.
push

pull

**Step 8:** Pull down on the tail of the tiger tail and push up on all the beads at once removing any gaps between the beads at the same time. Crush the crimp bead to secure in place. Clip off excess tail. Repeat steps 7-8 on the other strands.

**Step 9:** To finish, bunch up all 3 small jump rings again and place inside the second bail. Attach large jump ring and clasp. Re-close as in steps 4-6.
